

pdf_creator - CLI Tool to create PDF from HTML via DC Services SDK

This tool converts static HTML pages to PDF via Adobe DC Services SDK.

File Structure

The main application resides in `src/createpdf/` as `pdf_creator.js`. The dependency is only one `@adobe/dc-services-sdk` which can be found in this package's `package.json` file. The zip archive used to create the PDF in `output` can be found in `resources` as `sample.zip`. The `node_modules` directory contains dependency packages for the application.

Authentication and Credentials

Replace the `dc-services-sdk-credentials.json` and `private.key` file in the root directory with your credentials.

Run

To run the tool, please specify the full path to the `pdf_creator.js` and corresponding paths to the `.zip` and `.pdf` (to be created) respectively as

```
$ node src/createpdf/pdf_creator <path-to-zipped-html> <path-to-created-zip>
```

For example, the command to create the `sample.pdf` was

```
$ node src/createpdf/pdf_creator resources/sample.zip output/sample.pdf
```
